

Information on and consent to use InseLink

Patient details

Name:

First name:

Date of birth:

Address:

What is InseLink?

The InseLink tool has been developed as an interface to our hospital information system for the exchange of data between Insel Gruppe AG (hereinafter referred to as “Insel”) and other healthcare institutions as well as medical professionals such as GPs or referring physicians. Once patients have given their consent, this portal provides 24/7 access to patient records. The patient record is a collection of personal information including documents and data relating to your health. These include, for example, the discharge report from a hospital, the care report from Spitex, the list of medications, x-rays and the vaccination card. InseLink optimises external networking, and supports the holistic treatment of patients, especially with their GPs.

InseLink aims to strengthen the quality of medical treatment, improve treatment processes, increase patient safety and improve the efficiency of the healthcare system, and promote patients’ health literacy.

Sharing your patient record via InseLink is voluntary. If you have given your consent to the use of InseLink, it will be assumed that you generally wish your file to be passed on to persons or institutions that deal with you. You can revoke your consent at any time and without giving reasons. Your consent and revocation have no impact on your treatment at InselGruppe AG. In the event of a revocation, Insel Gruppe AG cannot retrieve the data already transmitted. Any requests for inspection or deletion must be submitted to the respective institutions themselves. You have the right to know which institutions have accessed your files.

Basic aspects of data processing by InseLink

With InseLink, your entire patient record is made accessible to other medical institutions and healthcare professionals. It is not possible to select only individual documents. Authorised staff can download copies of their medical records and store them in their own information systems outside Insel. The files that are located in

Insel will remain unchanged. All logins or attempts to access your patient record are logged, which means that it is noted who accessed your records or attempted to do so at what time.

Consent to the use of InselLink

I confirm that I have received and taken note of the information on the purpose and functioning of InselLink as well as my rights. In particular, I have been informed that I can revoke my consent at any time without giving a reason. I am aware that my entire patient record will be released if another healthcare institution or healthcare professional views my records via InselLink. I consent to the use of InselLink to access my patient records for my GP and follow-up care providers (such as specialists).
